

# How to invest in gravity energy storage projects best

Is gravity energy storage a good investment?

The results reveal that GES has resulted in good performance metrics including IRR and NPV of project and Equity, as well as ADSCR, and LLCR. In addition, for a 1 GW power capacity and 125 MWh energy capacity system, gravity energy storage has an attractive LCOS of 202 \$/MWh.

What is gravity & how does it work?

This allows renewable energy to be used when it is needed. Gravitricity is developing a novel storage technology which offers some of the best characteristics of lithium batteries and pumped storage. Its patented technology is based on a simple principle: raising and lowering a heavy weight to store energy.

What is green gravity & how does it work?

Green Gravity uses disused mines to store energy. This allows renewable energy to be used when it is needed. Gravitricity is developing a novel storage technology which offers some of the best characteristics of lithium batteries and pumped storage.

How much does gravity storage cost?

For Gravity Storage systems, the levelized cost of storage decreases as the system size increases. Based on the system cost, GES with an energy storage capacity of 1 GWh, 5 GWh, and 10 GWh has an LCOS of 202 US\$/MWh, 111 US\$/MWh, 92 US\$/MWh, respectively. This can be explained by the fact that the system CAPEX decreases with an increased capacity.

How does gravity energy storage work?

Gravitricity develops below ground gravity energy storage systems and raised \$40 million to commercialise projects in January this year, as covered by our sister site Solar Power Portal. The firm's technology works by raising weights in a deep shaft and releasing them when energy is required.

Is a project investment in energy storage a viable investment?

The project investment in all the studied energy storage systems is demonstrated viable to both project sponsors and lenders since the IRRs of the project for all systems in their last year of operation are larger than the projected WACC and the IRR of equity in their maturity year are better than the return on equity. 5.
