

Hydrogen energy storage profit analysis

How much does it cost to store hydrogen energy?

According to the given data, \$11.81/kg is the cost for hydrogen energy storage at 80% fill capacity. The cost for 10k psi H₂ storage is \$459/kg, which amounts to \$2,643,840 for 5760 kg. For cryo H₂ storage, the cost is \$25.5/kg, totaling \$81.6 million for 3.2 million kg.

Can energy storage plus excess hydrogen be competitive with dedicated hydrogen production?

However, for producing larger volumes of excess hydrogen to feed into a hydrogen pipeline, the scenario with energy storage plus excess hydrogen could be competitive with a dedicated hydrogen production facility. The energy storage plus excess hydrogen scenario produces 500 kg/hour (12,000 kg/day) of excess hydrogen for \$3.33/kg (untaxed).

What is the correlation between LH₂ and LNG installed storage cost?

HDSAM1 v3.1 LH₂ tank installed capital cost correlations are used around the range of 40,000 m³ for city gate. ANL2 reported LH₂ and LNG installed storage cost correlations up to ~8,000 m³. LH₂ correlation data up to 3,600 m³. Comparison is likely well outside the range of validity but included here for context and completeness. Green, M. A.,
