

Introduction to the functions of energy storage power station

What are battery storage power stations?

Battery storage power stations are usually composed of batteries, power conversion systems (inverters), control systems and monitoring equipment. There are a variety of battery types used, including lithium-ion, lead-acid, flow cell batteries, and others, depending on factors such as energy density, cycle life, and cost.

What is the construction process of energy storage power stations?

The construction process of energy storage power stations involves multiple key stages, each of which requires careful planning and execution to ensure smooth implementation.

Why do battery storage power stations need a data collection system?

Battery storage power stations require complete functions to ensure efficient operation and management. First, they need strong data collection capabilities to collect important information such as voltage, current, temperature, SOC, etc.

Why is system control important for battery storage power stations?

Secondly, effective system control is crucial for battery storage power stations. This involves receiving and executing instructions to start/stop operations and power delivery. A clear communication protocol is crucial to prevent misoperation and for the system to accurately understand and execute commands.

Why is energy storage important?

The storage of energy in very large quantities introduces issues of proper location and safety. As an example of the required scale, a large city, such as Tokyo, has an average power demand of approximately 30-40 GW. Thus the daily energy demand is approximately 840 GWh.

What is a battery energy storage system design plan?

Detailed battery energy storage system design plans were developed based on site surveys, geological assessments and technical specifications. This includes producing construction blueprints, drafting drawings from various disciplines (structural, civil engineering, electrical, etc.), and signing technical agreements with equipment manufacturers.
