Who participated in MIT study on the future of energy storage?

MIT Study on the Future of Energy Storage iii Study participants Study chair Robert ArmstrongChevron Professor,Department of Chemical Engineering,MIT Director,MIT Energy Initiative Study co-chair Yet-Ming Chiang Kyocera Professor,Department of Materials Science and Engineering,MIT Executive director Howard Gruenspecht

Do electrochemical storage systems have higher energy density than mechanical storage systems?

Electrochemical storage systems,which include well-known types of batteries as well as new battery variants discussed in this study,generally have higher energy densitythan mechanical and thermal storage systems,but lower energy density than chemical systems.

What is exergyin engineering thermodynamics?

In fact,all the work used to compress the air ends up as thermal energy. This stored heat together with the compressed air contribute to the useful work that can be recovered from storage. The capacity to do useful workis known as exergyin engineering thermodynamics.

Can energy storage help achieving deep decarbonization of the electricity system?

Since the main subject of this study is the role of energy storage in achieving deep decarbon- ization of the electricity system, we focus on hydrogen production using electrolysis, a technology that is already commercially available. In electrolysis, electricity is used to separate water into hydrogen and oxygen.

Can thermal energy storage be used for non-electricity storage?

Chapter 4 - Thermal energy storage 115 Box 4.1 hermal energy storage for non-electricity storage T Although this study focuses on energy storage using electricity as the only input and output,thermal energy storage can also be utilizedin other applications. Flexibility for thermal power plants

What are the different types of energy storage technologies?

Values from the Future of Energy Storage technical teams; refer to previous chapters for detailed description of individual technologies: hydrogen (Chapter 5); thermal (Chapter 4); metal-air,RFB,and Li-ion(Chapter 2). PHS = Pumped Hydro Storage,RFB = Redox Flow Battery.
