Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

Are Lem-Gess and existing energy storage systems used in primary response?

This paper presents an economic analysis of the LEM-GESS and existing energy storage systems used in primary response. A 10 MWh storage capacity is analysed for all systems. The levelised cost of storage (LCOS) method has been used to evaluate the cost of stored electrical energy.

What are energy storage technologies?

Informing the viable application of electricity storage technologies, including batteries and pumped hydro storage, with the latest data and analysis on costs and performance. Energy storage technologies store energy either as electricity or heat/cold, so it can be used at a later time.

Are recycling and decommissioning included in the cost and performance assessment?

Recycling and decommissioning are included as additional costs for Li-ion, redox flow, and lead-acid technologies. The 2020 Cost and Performance Assessment analyzed energy storage systems from 2 to 10 hours. The 2022 Cost and Performance Assessment analyzes storage system at additional 24- and 100-hour durations.

Can a linear electric machine-based gravity energy storage system be used in primary response?

Amongst others, a novel linear electric machine-based gravity energy storage system (LEM-GESS) has recently been proposed. This paper presents an economic analysis of the LEM-GESS and existing energy storage systems used in primary response. A 10 MWh storage capacity is analysed for all systems.
