

# Military energy storage development trend

What is the future market outlook for military batteries?

As per Future Market Insights (FMI), demand is expected to remain high for military batteries with a capacity of below 12V. This is due to their widening applications in the military & defense sector. The target segment is anticipated to thrive at 4.4% CAGR through 2033. Key Market Shaping Factors:

How will energy storage impact resiliency?

In addition, the large energy storage expected to be required to meet DoD resiliency goals will result in a BESS that has no need to use most of its SOC while grid tied to yield economic value. A higher minimum SOC will lead to a higher survival probability at 14 days, and a lower SOC minimum will lead to

Can long-duration energy storage (LDEs) meet the DoD's 14-day requirement?

This report provides a quantitative techno-economic analysis of a long-duration energy storage (LDES) technology, when coupled to on-base solar photovoltaics (PV), to meet the U.S. Department of Defense's (DoD's) 14-day requirement to sustain critical electric loads during a power outage and significantly reduce an installation's carbon footprint.

What is the growth rate of military batteries market in 2023?

Looking forward, the global military batteries market is set to register a growth rate of 4.7% CAGR between 2023 and 2033. It will create an absolute \$growth of about US\$0.805 billion during the projection period.

How much energy does the DOD use?

Energy is essential for DoD's installations, and DoD is dependent on electricity and natural gas to power their installations. In fiscal year 2022 (20), DoD's installations consumed more than 200,000 million Btu (MMBtu) and spent \$3.96 billion to power, heat, and cool buildings.

How big is the military batteries industry in 2022?

In 2022, the worldwide military batteries industry valuation reached US\$1.3 billion and for the next ten years, it is expected to generate an absolute \$growth of US\$0.805 million. As per Future Market Insights (FMI), demand is expected to remain high for military batteries with a capacity of below 12V.
