

Nissan solid state battery

The company's all-solid-state battery (ASSB) ambitions began in the mid-2010s. Nissan is currently in the advanced development phase, working on cell and pack structure design and production of the cell process.

Nissan is pumping up its presence in the EV market through the Formula E racing series, while prepping for a new all-solid-state EV battery.

The legendary GT-R is going electric and will likely be Nissan's first to use solid-state batteries. As the new tech develops, Nissan hinted that solid-state batteries could give the electric GT ...

Nissan will launch its first car with solid-state battery technology in 2028, the company has confirmed, representing a big step forward for EV tech for the Japanese brand.

The company's all-solid-state battery (ASSB) ambitions began in the mid-2010s. Nissan is currently in the advanced development phase, working on cell and pack structure ...

Nissan began operating its all-solid-state battery pilot line in January 2025. The company aims to launch EVs equipped with in-house developed all-solid-state batteries by ...

Nissan is betting big on solid-state batteries to help power up a comeback. The automaker says the next-gen battery tech will be a "game-changer for EVs," promising more range, faster charging ...

Nissan and LiCAP partner for solid-state batteries tech Nissan started operations of its all-solid-state battery pilot line in January this year.

Nissan says it's in a "class-leading position" to make the first batch of liquid-free, lower-cost solid-state batteries in 2025, with a brand new electric vehicle powered by said batteries ...

Nissan is on track to launch an all-solid state battery (ASSB) by the end of fiscal year 2028, executives affirmed to InsideEVs during the brand's future tech preview event in Japan.

In-house, it plans to both perfect development of all-solid-state battery (ASSB) cells and establish how to make them, with the tech due to make it into a production EV by 2028.

When will Nissan launch its first solid-state battery EV? After showcasing its all-solid-state battery pilot line at its Yokohama plant last year, Nissan is moving forward with the...

Nissan is on track to launch an all-solid state battery (ASSB) by the end of fiscal year 2028, executives

Nissan solid state battery

affirmed to InsideEVs during the brand's future tech preview event in ...

According to Nissan, all-solid-state batteries promise higher energy density, faster charging, and improved safety compared to current lithium-ion technology, making them ...

In its long-term vision, Nissan Ambition 2030, Nissan announced that, by FY2028, it aims to launch an electric vehicle (EV) with all-solid-state batteries (ASSBs) that have been developed ...

Solid-state batteries and wireless charging represent the next big technological improvements for electric vehicles. Nissan now says it will have a production EV with solid ...

By the way of announcing the Ambition 2030 long-term strategy, Nissan has revealed that it's making progress on the lithium-ion battery technology front.

Nissan kicked off construction on its all-solid-state EV battery pilot line this week with plans to introduce them in a wide range of models, including pickups.

Nissan highlighted that scaling this approach to mass production presents challenges in maintaining high production efficiency, which the partnership with LiCAP aims to ...

A Nissan worker shows a facility that set to be a plant for electric vehicles powered by all-solid-state batteries in Yokohama, Japan, Tuesday, April 16, 2024. Nissan expects to mass produce electric vehicles powered by ...

Solid-state batteries and wireless charging represent the next big technological improvements for electric vehicles. Nissan now says it will have a production EV with solid batteries in...

Nissan's European product planner Christophe Amblard told AutoExpress that everything is on track for a solid-state battery debut from the automaker in the next three years: ...

Nissan's European product planner Christophe Amblard told AutoExpress that everything is on track for a solid-state battery debut from the automaker in the next three years: "Yes, we will..."

The name "solid state" could just as well be "solid electrolyte" because the main difference between a conventional lithium ion battery cell and a solid-state lithium ion cell is that the electrolyte is solid rather than a liquid. ...

Nissan today unveiled its prototype production facility for laminated all-solid-state battery cells, which the company aims to bring to market in 2028. This prototype facility, within ...

Solid-state batteries and wireless charging represent the next big technological improvements for electric vehicles. Nissan now says it will have a production EV with solid batteries in 2028 ...

Nissan solid state battery

A high-ranking official confirmed that Nissan will launch solid-state batteries in 2028. The tech is expected to improve energy density, faster charging, and longer range.

The Battery That Could Make Nissan a Tesla Killer Is Coming in 2028 Nissan's solid-state batteries are confirmed, and it will only be a few years before we see one in an EV.
