

Philippines energy storage frequency regulation field

Which DER systems are required in the Philippine legal and regulatory framework?

It focuses on enhancements required in the Philippine legal and regulatory framework for the following DER systems: (1) distributed generation,(2) micro or minigrids,and (3) energy storage.

Do energy storage stations improve frequency stability?

With the rapid expansion of new energy,there is an urgent need to enhance the frequency stability of the power system. The energy storage (ES) stations make it possible effectively. However,the frequency regulation (FR) demand distribution ignores the influence caused by various resources with different characteristics in traditional strategies.

Should energy storage be regulated by the ERC?

The ERC,either motu proprio or upon initiation by an electric power industry participant following its rulemaking procedures,should set additional regulations governing the use of energy storage,whether for grid support or allowing DG to use batteries to maximize onsite savings (Jacobs et al. 2016).

Do energy storage technologies fit into existing regulatory frameworks?

Enhancements to the legal and regulatory framework As observed by the IEA,energy storage technologies "do notfit naturally into existing regulatory frameworks" (IEA 2014,p.46),such as in the Philippines,which has unbundled its electricity system into generation,transmission,supply,and distribution.

Is energy storage a new regulatory resource?

As a new type of flexible regulatory resourcewith a bidirectional regulation function [3,4],energy storage (ES) has attracted more attention in participation in automatic generation control (AGC). It also has become essential to the future frequency regulation auxiliary service market .

Is there a governing policy framework for energy storage?

Internationally,the department said,energy storage systems are in use for a variety of applications relating to the transmission,distribution and generation of energy. Domestically however,various stakeholders have raised concerns that there is a "lackof governing policy framework for its regulation and operation".
