

What is a charging pile monitoring platform?

The monitoring platform is designed to provide auxiliary tools for the management and maintenance of charging piles, to ensure their safe operation. Since the existing monitoring platform mainly applies blockchain technology. Generally, the charging pile provides two charging methods: conventional charging and fast charging.

What are the benefits of online monitoring of charging pile equipment?

The tracking of performance, grid integration, maintenance planning, user experience, security, proper invoicing, energy use management, fault detection, and regulatory compliance are all improved by data-driven online monitoring of charging pile equipment.

What is a charging pile?

The charging piles are connected to the power supply grid and electric vehicles, respectively, to provide electric energy supply and other related services for electric vehicles. In terms of structure, the charging pile consists of five modules: pile body, electrical, metering, accounting management, and human-computer interaction.

Why is the monitoring precision of a charging pile high?

The reason why the monitoring precision of the platform is high in this paper is that the platform collects various data of charging piles by using big data technology based on the data model constructed, which optimizes the monitoring effect. Technology is the means to embody the value of big data and the cornerstone of progress.

How far is a charging pile from a monitoring center?

The farthest charging piles from the monitoring center in the target area were set as the charging piles in abnormal running, and their distances were 100 m, 120 m, 140 m, and 160 m respectively. The design platform was used to monitor the charging pile, and the test results of the platform monitoring range were obtained, as shown in Fig. 8.

Can big data improve charging pile operation safety?

The application of big data and its technology to the optimization design of an online platform for monitoring charging pile operation safety is expected to improve the monitoring function and maximize the application safety of charging pile equipment.
