How much does a PV system cost in 2022?

The current MSP benchmarks for PV systems in 2022 real USD are \$28.78/kWdc/yr(residential),\$39.83/kWdc/yr (community solar),and \$16.12/kWdc/yr (utility-scale,single-axis tracking). For MMP,the current benchmarks are \$30.36/kWdc/yr (residential),\$40.51/kWdc/yr (community solar),and \$16.58/kWdc/yr (utility-scale,single-axis tracking).

How efficient is a rooftop PV system?

We model a baseline 8-kWdc rooftop PV system using 20.8%-efficient,1.97-m² monofacial monocrystalline silicon modules from a Tier 1 U.S. supplier,microinverters with an inverter loading ratio (ILR) of 1.21 imported from China with the Section 301 tariff,and a 5-kW/12.5-kWh alternating-current (ac) coupled lithium-ion storage system.

What is pvscm system cost?

The PVSCM system cost is the price paid by the system owner to the system developer. Any tax credit realized by the owner is excluded and must be considered separately. Tariffs paid on imported hardware are treated as temporary market distortions that increase MMP but not MSP.

How many inverters does a PV system use?

The DC cables are connected to 19utility-scale central inverters,each rated at 4 MW ac,giving the PV system a rated AC power output of 76 MW ac,which corresponds to an inverter loading ratio of 1.32. The inverters are made in Europe in a plant that produces 250 of them each year. These inverters are not subject to import tariffs.

How big are PV modules in 2023?

Modules for residential PV systems and utility-scale PV systems are substantially larger this year: 1.97 m²and 410 Wdc,and 2.57 m² and 525 Wdc,respectively in Q1 2023,compared with 1.8 m² and 360 Wdc,and 2.0 m² and 405 Wdc,in the Q1 2022 report.

What is the IRA & how does it affect PV installations?

The IRA,which was passed into law in August 2022,created incentives for domestic PV manufacturing and deploymentthat analysts expect to drive significant increases in U.S. PV installations and use of domestically manufactured components (Feldman et al. 2022).
