Can predictive maintenance help manage energy storage systems?

This article advocates the use of predictive maintenance of operational BESS as the next step in safely managing energy storage systems. Predictive maintenance involves monitoring the components of a system for changes in operating parameters that may be indicative of a pending fault.

What are the guidelines for battery management systems in energy storage applications?

Guidelines under development include IEEE P2686 "Recommended Practice for Battery Management Systems in Energy Storage Applications" (set for balloting in 2022). This recommended practice includes information on the design, installation, and configuration of battery management systems (BMSs) in stationary applications.

Should the energy storage industry shift to a predictive monitoring and maintenance process?

This article recommends that the energy storage industry shift to a predictive monitoring and maintenance process as the next step in improving BESS safety and operations. Predictive maintenance is already employed in other utility applications such as power plants, wind turbines, and PV systems.

Do energy storage products need periodic maintenance?

The requirements for periodic maintenance for energy storage products should be identified by the OEM (IEEE 2010). In settings where predictive analytics maintenance is economical, guidance should also be available from the manufacturer that identifies methodologies for assessing when a product may be approaching a failure mode.

How do I manage a fleet of PV systems?

Operating and maintaining a fleet of PV systems requires active resource management and data acquisition and analysis by the asset and operation manager(s). Outsource the service to a specialized third-party O&M provider.

How often should energy storage systems be inspected?

For example, an Energy Storage Safety 101 presentation during a May 2020 meeting of the California Energy Storage Alliance recommended semi-annual steps such as visual inspections of the overall system, examining the HVAC (cooling), and checks on the ESS software control and communications.
