How long can an energy storage system last?

This energy storage system is capable of storing six to 12 hours or more of energy and dispatching it as needed.

How far from a Bess project can a battery be recycled?

LIBs are regulated by the Department of Transportation as Class 9 hazardous material and have additional requirements for packaging, labeling, and handling. The average distance between existing BESS projects and their nearest recycling locations is 138 miles. Depends on battery composition and recycling technology.

Should a utility company recycle a Bess battery?

Utility companies always recycle batteries from decommissioned BESSs since they do not want any liability associated with reuse/repurposing. Other BESS owners/operators could consider reuse/repurposing, but at present the volume of reusable/repurposable batteries is too small for them to make a business case.
