What is a C&I energy storage system?

A C&I (Commercial and Industrial) energy storage system is an energy storage solution designed for commercial and industrial applications, such as factories, office buildings, data centers, schools, and shopping centers.

What are commercial and industrial energy storage solutions?

Our commercial and industrial energy storage solutions offer from 30kW to 30+MW. We have delivered hundreds of projects covering most of the commercial applications such as demand charge management, PV self-consumption and back-up power, fuel saving solutions, micro-grid and off-grid options.

What is a commercial battery storage system?

Our commercial battery storage systems utilize demand charge management, dynamic capacity expansion, and demand-side response to improve commercial and industrial energy storage and enhance new energy distribution. Project features 5 units of HyperStrong's liquid-cooling outdoor cabinets in a 500kW/1164.8kWh energy storage power station.

What is a commercial energy storage system?

Commercial energy storage systems can be used to store excess energy generated from on-site solar panels or wind turbines or to provide backup power during grid outages or emergency situations.

What are the different types of C&I energy storage systems?

The main types of C&I energy storage systems include battery-based, thermal, mechanical, hydrogen energy storage, and supercapacitors. Battery-based systems are the most commonly used type of C&I energy storage systems. They store energy using electrochemical batteries such as lithium-ion, lead-acid, or flow batteries.
