

# Solar charge controller battery icon flashing

Why is my solar charge controller battery light blinking?

Solar charge controller battery icon flashing means that the battery is not charging properly, which may be caused by insufficient battery power, charging problem, ambient light change, controller malfunction or bad weather conditions. Solar battery light blinking yellow means the battery is charged.

What does a solar charge controller battery blinking green mean?

Solar charge controller battery blinking green means the battery is fully charged and in a saturated state. A flashing red battery light means the battery is undercharged and needs to be recharged in time. Solar controller loads are small DC devices that can be powered directly by a solar battery.

Why is my solar panel icon flashing?

The classic issue. Wrong wiring is the single most common issue of many problems related to Solar Panels. First of all, if your panel is properly wired the charge controller would detect stable power input from the Solar Panel. The panel icon should stay stable. If it's unstable, this icon will flash to warn you.

Why is my solar charge controller not working?

Use a voltmeter to check if any charge is available in your battery. If the battery is faulty, it would be best to replace it with a working solar battery. Sometimes your solar charge controller is not working because it is low quality. The low-quality charge controller will jam when a lot of energy is being sent through it.

Why is my charge controller blinking?

Overall, Charge Controller Blinking means a natural process is happening most of the time. But if the Blinking is different (i.e. Red Light is a big indication of trouble), it is mostly due to Faulty Wiring, Battery being Over or Undercharged, or Bad Equipment. After identifying the problem, you have to take the necessary steps.
