

# Solar pump with battery backup

What is a solar panel water pump battery backup?

A solar panel water pump battery backup is a system that stores extra power in batteries during the day. This allows the solar water pump to operate when the sun goes down, extending the time your solar pond pump works at night in your pond or water feature.

What is the solar battery back-up for solar fountain pump?

The solar battery back-up is designed specifically for solar fountain pumps. It can store solar energy for use day or night. The input power should be from a solar module or DC power supply with an output voltage of 18V. It has build-in functions of overcharging and over discharging protection.

What is a solar battery back-up system?

In a solar battery back-up system, the battery needs to hold enough power for your everyday use while keeping some energy in reserve in case a power cut happens. The larger the capacity of the battery in kW, the more energy you can reserve for power cut back-up and the more appliances you'll be able to run during a power cut.

How do solar batteries work with back-up power?

Solar batteries with back-up power have a relay (a switch) which will automatically disconnect your electricity supply from the grid when it detects a power cut. This is called islanding. This relay is installed between your main fuse board and the incoming electricity supply.

Who makes good solar fountain pump kits?

Silicon Solar manufactures industry-leading solar fountain pump kits. The AquaJet 24V Custom Solar Fountain High-Powered Pump Kit is built with the highest quality, commercial-grade parts and components with water sealed connections. The AquaJet Custom series is among the largest solar water pump kits we offer.

What is a 9V solar pump?
