What is a battery-free solar system?

In the conventional models, batteries are used to hold electricity in anticipation of the period when production through solar power is small e.g. during the night or during cloudy weather. However, battery-free solar systems, also known as grid-tied systems, forgo batteries altogether.

How does a solar system work without battery storage?

Without battery storage, solar systems typically do not use the utility grid as a battery. Solar energy is first used to directly power your home and the excess energy is pushed onto the local grid to power neighboring systems. When the solar system is underproducing, the home draws electricity from the local grid.
