

How big is the global solid state battery market?

The global solid state battery market was valued at USD 1.1 billion in 2024 and is set to grow at a CAGR of 31.1% from 2025 to 2034.

How much does energy storage cost?

Energy storage system costs for four-hour duration systems exceed \$300/kWh for the first time since 2017. Rising raw material prices, particularly for lithium and nickel, contribute to increased energy storage costs. Fixed operation and maintenance costs for battery systems are estimated at 2.5% of capital costs.

What is the future of electronic solid state battery market?

The consumer electronic solid state battery market will observe a CAGR of over 25% through 2034. Rapid adoption of these batteries in a wide range of devices including AR/VR devices, tablets, wearables, laptops, and smartphones will augment the business trajectory.

What is the segmentation of solid state battery market?

The market for capacity is segmented into Below 20 mAh, 20 - 500 mAh, and above 500 mAh. The Below 20 mAh segment for solid state battery market was accounted for over USD 650 million in 2024 on account of sustainability initiatives, increasing safety demand, and rising investment in R&D capabilities.

How much money has China invested in solid state batteries?

For instance, in May 2024, China has announced to invest over USD 830 million into a government program to increase the development of solid state batteries, where 6 major players were selected for the government funding.

Why are energy storage systems so expensive?

Energy storage systems (ESS) for four-hour durations exceed \$300/kWh, marking the first price hike since 2017, largely driven by escalating raw material costs and supply chain disruptions. Geopolitical issues have intensified these trends, especially concerning lithium and nickel.
