

What is integrated source-grid-load-storage?

With the emergence of strategies for carbon neutrality and the development of a new power system, local governments are actively promoting the construction of integrated source-grid-load-storage systems in industrial development zones with a high proportion of renewable energy (hereinafter referred to as integrated systems) .

Is a source-grid-load-storage integrated system suitable for urban industrial zones?

Developing a novel source-grid-load-storage integrated system in urban industrial zones abundant in new energy is a crucial approach for achieving energy self-management and efficient utilisation.

Are source load and storage adjustable resources in a microgrid system?

When conducting collaborative optimization for source,load and storage in a microgrid,most of the existing literatures regard source,load,and storage as adjustable resourcesin the microgrid system from the perspective of the microgrid system so as to improve the safe,stable,efficient and economical operation level of the microgrid system.

What is a source-storage-load coordination and optimization strategy based on edge computing?

Therefore,this paper proposes a source-storage-load coordination and optimization strategy based on edge computation,which deploys "edge nodes" at the points close to the data,and coordinates and optimizes the source-storage-load based on edge computing.

How much does electricity cost in a high-level grid?

The cost of electricity purchased from the higher-level grid accounts for 73.26% of the total operating cost. The integrated system experiences energy purchasing during periods of high renewable energy generation. This is because of the large source-load imbalanced power during peak load periods.

How can microgrids contribute to the power system?

Microgrids can participate in the operation of the entire power system through "distributed autonomy or centralized coordination",thereby achieving large-scale and efficient grid-connected application of renewable energy and improving power quality and safe,stable,economical and efficient operation level of the power system [16,17].
