

Sunsei solar battery charger

What is a solar external panel battery charger?

Our solar chargers are designed to charge batteries such as cars, boats, RVs, and more. They utilize solar power energy. A solar external panel is used to charge batteries with our solar chargers. BatteryStuff.com is proud to offer competitive pricing for smaller solar external panel battery charger items to keep you powered up.

Can a solar panel charge a battery directly?

This allows your solar panel to act as a battery solar charger, giving you worry-free charging. A solar panel can charge a battery by producing solar power, which is then converted and regulated by a controller to charge the battery safely.

When should I use a solar charge controller?

A solar charge controller should be used on any photovoltaic system when the total watt output of your solar panels is 5 watts or higher. These units act as an on/off switch for your solar panel to prevent overcharging of your battery or batteries when they reach full charge.

How does a solar battery charger function?

A solar battery charger functions as a smart battery charger with a controller that measures the voltage in the battery. It shuts off when fully charged and turns back on when the battery voltage drops. This allows the panel to charge the battery automatically.

ICP Solar Technologies grants the original purchaser of the Sunsei® SolarCharger SE150/SE500/SE1500 a 10-year warranty on the power output and a 2-year warranty on the ...
