

The benefits of increasing energy storage for peak and frequency regulation

Can battery energy storage system be used for frequency and peak regulation?

Some scholars have made lots of research findings on the economic benefit evaluation of battery energy storage system (BESS) for frequency and peak regulation. Most of them are about how to configure energy storage in the new energy power plants or thermal power plants to realize joint regulation.

How can peak shaving and frequency regulation improve energy storage development?

The main contributions of this work are described as follows: A peak shaving and frequency regulation coordinated output strategy based on the existing energy storage participating is proposed to improve the economic problem of energy storage development and increase the economic benefits of energy storage on the industrial park.

What are the benefits of frequency regulation?

When participating in the frequency regulation service market, the mileage of the energy storage battery following the frequency regulation signal determines the benefits brought by the energy storage. Deeper following of the signal will give more frequency regulation mileage benefits and reduce the penalty caused by insufficient output.

Do energy storage systems provide Primary Reserve and peak shaving?
