

# The development prospects and trend analysis and design plan of energy storage

What are the emerging energy storage business models?

The independent energy storage model under the spot power market and the shared energy storage model are emerging energy storage business models. They emphasized the independent status of energy storage. The energy storage has truly been upgraded from an auxiliary industry to the main industry.

What is the implementation plan for the development of new energy storage?

In January 2022, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system.

When did energy storage technology start?

The large-scale development of energy storage began around 2000. From 2000 to 2010, energy storage technology was developed in the laboratory. Electrochemical energy storage is the focus of research in this period. From 2011 to 2015, energy storage technology gradually matured and entered the demonstration application stage.

What are the challenges and opportunities in the energy storage industry?

Challenges and Opportunities in the Energy Storage Industry storage solutions rising alongside substantial challenges. The global shift toward renewable efficient and reliable storage technologies. In 2021, China accounted for over 50% of the [ ].

What is a composite energy storage business model?

The composite energy storage business model is highly flexible and can fully mobilize power system resources to maximize the utilization of energy storage resources. The model can reduce the risk of energy storage investment and accelerate the development of energy storage. 4.3.2. Microgrid model

What is the life cycle assessment of energy storage technologies?

Then, compared with the existing research strategies, a comprehensive life cycle assessment of energy storage technologies is carried out from four dimensions: technical performance, economic cost, safety assessment, and environmental impact.

The new power system path design should be based on the actual development of the power grid in different regions, energy use characteristics, and other actual needs to ...
