

The difference between pre-storage and no pre-storage

What is pre-cooling in a cold storage facility?

It is the first operation in the cold chain and is essential for produce (fruits and vegetables) as they are perishable in nature. Although produce may be pre-cooled in a cold storage facility, pre-cooling differs from cold storage. In cold storage, the temperature is simply maintained at a predetermined low temperature.

Does Cold Storage double as a pre-cooling facility?

In cold storage, the temperature is simply maintained at a predetermined low temperature. If the cold storage facility is to double as a pre-cooling facility, higher refrigeration capacity is required as well as appropriate provisions for pre-cooling and handling of the produce.

What is a pre-built storage shed?

A pre-built storage shed is exactly what it sounds like: a shed that has been built beforehand at the shop and designed for storage purposes. Of course, a storage shed can be used for many other purposes other than storage.

What is the average lifespan of a pre-built storage shed?

The average lifespan of a pre-built storage shed is 30 years. When you're considering a pre-built storage building purchase, remember that these sheds will last you for a while.

What should I consider before buying a pre-built storage shed?

Before buying a pre-built storage shed, consider your needs and what you want to store. Ask yourself: Do I need household storage? Do I need to store gardening tools? Or perhaps you need a place to park your lawn mower and other outdoor equipment.
