

# The lowest cost large-scale energy storage method

What are the cheapest energy storage technologies?

Power to Gas technologies, once established on the market, may also provide long-term electricity storage at even lower LCOS. Pumped-Storage Hydroelectricity is also the cheapest technology for short-term storage systems. Battery systems at the moment still have high costs but are expected to have a sharp price decrease in the near future.

Which energy storage technologies will be more cost efficient in the future?

The ratio of charging/discharging unit power and storage capacity is important. PSH and CAES are low-cost technologies for short-term energy storage. PtG technologies will be more cost efficient for long-term energy storage. LCOS for battery technologies can reach about 20 EURct/kWh in the future.

Could liquid air energy storage be a low-cost option?

New research finds liquid air energy storage could be the lowest-cost option for ensuring a continuous power supply on a future grid dominated by carbon-free but intermittent sources of electricity.

What is the levelized cost of Energy Storage (LCOS)?

PSH and CAES are low-cost technologies for short-term energy storage. PtG technologies will be more cost efficient for long-term energy storage. LCOS for battery technologies can reach about 20 EURct/kWh in the future. This paper presents a detailed analysis of the levelized cost of storage (LCOS) for different electricity storage technologies.

Which energy storage technology has the lowest LCoS?

The results for the long-term storage show that Pumped-Storage Hydroelectricity has the lowest LCOS among the mature technologies today. Power to Gas technologies, once established on the market, may also provide long-term electricity storage at even lower LCOS.

Why is energy storage more expensive than alternative technologies?

High capital cost and low energy density make the unit cost of energy stored (\$/kWh) more expensive than alternative technologies. Long duration energy storage traditionally favors technologies with low self-discharge that cost less per unit of energy stored.
