What is the difference between storage modulus and loss modulus?

Storage modulus (G') is a measure of the energy stored by the material during a cycle of deformation and represents the elastic behaviour of the material. Loss modulus (G'') is a measure of the energy dissipated or lost as heat during the shear cycle and represents the viscous behaviour of the material (Sankar et al., 2011).

What is a storage modulus?

The storage modulus is a measure of how much energy must be put into the sample in order to distort it. The difference between the loading and unloading curves is called the loss modulus, E'' . It measures energy lost during that cycling strain. Why would energy be lost in this experiment? In a polymer, it has to do chiefly with chain flow.

What is storage modulus in abrasive media?

This study is also used to understand the microstructure of the abrasive media and to infer how strong the material is. Storage modulus (G') is a measure of the energy stored by the material during a cycle of deformation and represents the elastic behaviour of the material.

What is a master curve of a shear modulus?

Master curve of the shear modulus at a reference temperature of $-10 \text{ }^\circ\text{C}$. Master curve of the shear compliance at a reference temperature of $-10 \text{ }^\circ\text{C}$. From the measurement curves in Section 3.4.2, all the storage and loss moduli are displayed as a function of frequency at every temperature.

What is storage modulus in tensile testing?

Some energy was therefore lost. The slope of the loading curve, analogous to Young's modulus in a tensile testing experiment, is called the storage modulus, E' . The storage modulus is a measure of how much energy must be put into the sample in order to distort it.

What is storage modulus & loss modulus in oscillatory shear study?

The storage modulus and the loss modulus give the details on the stress response of abrasive media in the oscillatory shear study. This study is also used to understand the microstructure of the abrasive media and to infer how strong the material is.
