What are some sources of thermal energy for storage?

Other sources of thermal energy for storage include heat or cold produced with heat pumps from off-peak, lower cost electric power, a practice called peak shaving; heat from combined heat and power (CHP) power plants; heat produced by renewable electrical energy that exceeds grid demand and waste heat from industrial processes.

What is thermal energy storage?

Thermal energy storage (TES) is the storage of thermal energy for later reuse. Employing widely different technologies, it allows surplus thermal energy to be stored for hours, days, or months. Scale both of storage and use vary from small to large - from individual processes to district, town, or region.

What are the different types of thermal energy storage?

The kinds of thermal energy storage can be divided into three separate categories: sensible heat, latent heat, and thermo-chemical heat storage. Each of these has different advantages and disadvantages that determine their applications. Sensible heat storage (SHS) is the most straightforward method.

Can molten salts be used as thermal energy storage?

Molten salts can be employed as a thermal energy storage method to retain thermal energy. Presently, this is a commercially used technology to store the heat collected by concentrated solar power (e.g., from a solar tower or solar trough).

Can thermal energy storage be used in buildings?

Through industry partnerships, NREL researchers address technical barriers to deployment and widespread adoption of thermal energy storage in buildings. In the United States, buildings consume approximately 39% of all primary energy and 74% of all electricity.

Can thermal energy storage be a building decarbonization resource?

NREL is significantly advancing the viability of thermal energy storage (TES) as a building decarbonization resource for a highly renewable energy future. Through industry partnerships, NREL researchers address technical barriers to deployment and widespread adoption of thermal energy storage in buildings.
