Will Volkswagen have a solid-state battery production facility by 2025?

Volkswagen has announced that it aims to have a production facility for solid-state batteries by 2025. The announcement comes with the VW Group's \$1.6375 billion investment in Californian battery technology company QuantumScape, following six years of collaboration with the firm.

Does Volkswagen have solid-state battery technology?

Volkswagen has signed a deal to mass-produce solid-state battery technology for its future lineup of electric vehicles. The technology comes from California-based battery company QuantumScape, which will license its formula to PowerCo, Volkswagen's internal battery division.

Could a solid-state battery boost Volkswagen e-Golf's range?

Solid-state battery technology, Volkswagen claims, would more than double the capacity compared with the brand's current lithium ion batteries, boosting the range of the Volkswagen e-Golf from its current 186 miles (NEDC) to 466 miles.

How many GWh can a Volkswagen battery produce a year?

Under the agreement, Volkswagen's battery unit PowerCo can manufacture up to 40 gigawatt-hours (GWh) per year using the QuantumScape technology, with an option to expand to 80 GWh, which is enough to equip approximately 1 million vehicles annually, they said. Solid-state batteries can hold more energy than current liquid electrolyte batteries.

Are Volkswagen batteries ready for mass production?

The batteries aren't quite ready for mass production and still require further testing. Volkswagen can only turn on the production line upon "satisfactory technical progress" and a \$130 million prepayment of royalties to QuantumScape.

Are solid-state batteries the future?

Solid-state batteries could also bring much higher electric range, faster charging, and improved safety. "We have been collaborating and testing QuantumScape prototype cells for years now and we are looking forward to bringing this technology of the future into series production," says PowerCo CEO Frank Blome.
