

What are the hazards of battery energy storage stations

What can go wrong with a battery energy storage system?

Figure 2: Example Battery Energy Storage System (BESS) What can go wrong? Like all electrical systems operating at high voltage, a battery facility poses traditional hazards such as arc flashing, electrocution and electrical fires. These hazards are well-known, and the controls understood.

What is a stationary battery energy storage system?

Stationary battery energy storage systems (BESS) have been developed for a variety of uses, facilitating the integration of renewables and the energy transition. Over the last decade, the installed base of BESSs has grown considerably, following an increasing trend in the number of BESS failure incidents.

How to reduce the safety risk associated with large battery systems?

To reduce the safety risk associated with large battery systems, it is imperative to consider and test the safety at all levels, from the cell level through module and battery level and all the way to the system level, to ensure that all the safety controls of the system work as expected.

How common are battery storage fires & explosions?

Incidents of battery storage facility fires and explosions are reported every year since 2018, resulting in human injuries, and millions of US dollars in loss of asset and operation.

Are battery facilities a fire hazard?

Like all electrical systems operating at high voltage, a battery facility poses traditional hazards such as arc flashing, electrocution and electrical fires. These hazards are well-known, and the controls understood. However, the US-based National Fire Protection Association (NFPA) has highlighted four hazards specific to BESS (Ref. 5). 1.

What are the risks of a battery fire?

BESS incidents can present unique challenges for host communities and first responders: Fire Suppression: Lithium battery fires are extremely difficult to extinguish and may reignite hours or days later. Emissions: Battery fires can release harmful gases that pose health risks to nearby residents and first responders.
