

What does outdoor energy storage battery capacity mean

What is battery energy storage capacity?

Battery energy storage capacity is the total amount of energy the battery can store, measured in kilowatt-hours (kWh) or megawatt-hours (MWh). Think of this as like the size of a water tank where you measure the water capacity in litres.

What is battery capacity?

Battery capacity--measured in kilowatt-hours--shows the raw amount of electricity a battery can hold, just like the size of a fuel tank. A 10 kWh unit could, in theory, power a 1 kW load for ten hours. Typical households consume 18-20 kWh a day, but only your after-solar hours matter when sizing storage.

How much energy can a battery store?

Similarly, the amount of energy that a battery can store is often referred to in terms of kWh. As a simple example, if a solar system continuously produces 1kW of power for an entire hour, it will have produced 1kWh in total by the end of that hour.

What is battery storage duration?

Battery storage duration describes how long the battery can discharge at its rated power. It's calculated: Energy Capacity (MWh) \div Power Rating (MW). A 4 MWh battery with a 1 MW power rating has a 4-hour duration. A 1 MWh battery with a 2 MW power rating has a 0.5-hour duration. We've written about storage duration in more detail [here](#).

How does power rating affect battery storage duration?

The larger the pipe the faster we can fill or empty our water tank. And similarly the larger the power rating the faster we can charge or discharge our battery. Battery storage duration describes how long the battery can discharge at its rated power. It's calculated: Energy Capacity (MWh) \div Power Rating (MW).

What is a battery power rating?

The more energy stored, or more kilowatt-hours (kWh) or megawatt-hours (MWh), the longer the battery can supply power. Power rating or power capacity is the maximum rate at which the battery can discharge or charge, measured in kilowatts (kW) or megawatts (MW). It's normally determined by the capacity the battery system's power conversion equipment.

A larger battery cell can store more energy than a smaller battery of the same type. Energy storage is measured in ampere-hours (Ah) or watt-hours (Wh).
