

What is the job of an energy storage integrator

What does a battery energy storage system integrator do?

Image: RWE. The battery energy storage system (BESS) industry is changing rapidly as the market grows. At the heart of what is becoming a crowded and competitive market is the role of the system integrator: putting together the components and technologies that bring BESS projects to life.

What does a system integrator do?

System integrators are diving deeper into understanding what is required of them within warranties and what their customers -- often project developers -- are looking for. The market is better trying to understand the whole after sales service piece, from operations and maintenance (O&M), to warranties. This is still a very "tailored" offering.

Do system integrators have an advantage?

One piece of IP held firmly to by system integrators and still considered an advantage is their expertise with energy management systems(EMS). System integrators have deep knowledge of the hardware required for BESS projects,which in turns makes them well qualified to know what sort of software will drive that hardware.

What makes a good system integrator?

Another big addition to the core competency set of integrators is a focus on bundling up long-term services and creating customer peace of mind. System integrators are diving deeper into understanding what is required of them within warranties and what their customers -- often project developers -- are looking for.

Why should system integrators use EMS?

One advantage that gives system integrators is that they can apply their EMS across projects using systems and components from different vendors,opening up their pipeline of potential projectsversus a developer doing it in-house or an OEM working on its own hardware only.

Are system integrators the most leveraged & capital intensive business?

That said,a limitation for many system integrators is that "they're not necessarilythe most leveraged or the most capital intensive businesses in this part of the industry," meaning the pool of integrators big enough or with a long enough track record to offer that risk mitigation is limited.
