

What is the most profitable thing in the energy storage industry

Which energy storage technology has the highest share?

Mechanical energy storage has the highest share across all the energy storage technologies. It is comprised of systems such as, pumped hydro storage (PHS), flywheels (FES) and compressed air energy storage (CAES). These systems are widely used and are advantageous on large scale in various commercial, industrial, and residential uses (Table 3).

Which energy storage systems are most promising?

Thus, among the energy storage systems we can highlight the chemical approach represented by water-splitting, and the electrochemical (such as batteries and supercapacitors) as the most promising devices to store solar, wind and hydroelectric energy as electricity.

Do investors underestimate the value of energy storage?

While energy storage is already being deployed to support grids across major power markets, new McKinsey analysis suggests investors often underestimate the value of energy storage in their business cases.

What are the most cost-efficient energy storage technologies?

Most Cost-Efficient Technologies Relative to Discharge Duration and Annual Cycle Requirements Excluding Pumped Hydro and Compressed Air from 2015 to 2030. We find pumped hydro, compressed air, and flywheel energy storage were the most competitive technologies across the entire spectrum of modeled discharge and frequency combinations in 2015.

Should energy storage be undervalued?

The revenue potential of energy storage is often undervalued. Investors could adjust their evaluation approach to get a true estimate--improving profitability and supporting sustainability goals.

How do I evaluate potential revenue streams from energy storage assets?

Evaluating potential revenue streams from flexible assets, such as energy storage systems, is not simple. Investors need to consider the various value pools available to a storage asset, including wholesale, grid services, and capacity markets, as well as the inherent volatility of the prices of each (see sidebar, "Glossary").
