Why is peak-regulation important in power grids?

Peak-regulation in power grids needs to follow the fluctuation of renewable energy generation in addition to the variable load demands. Moreover, the wind power curve usually shows opposite increasing trend to the load curve, which requires more peak-regulation supply to guarantee the secure operation of power grids.

How effective is peak-load regulation capacity planning?

Based on probabilistic production simulation, a novel calculation approach for peak-load regulation capacity was established in Jiang et al. (2017), which is still effective for peak-regulation capacity planning when some information of renewable energy and loads is absent.

How many GW of battery storage will a national peaking power fleet have?

The NREL study found that the capacity of the national peaking power fleet is about 261 GW and about 150 GW of that capacity is likely to retire over the next 20 years, creating the potential for about 28 GW of 4-hour battery storage that could serve as peaking capacity.<sup>2</sup>

Which energy resources are integrated into urban power grids?

In this paper, we consider various energy resources integrated into the urban power grids, such as thermal power including coal-fired and gas-fired power units, hydro power plants, nuclear power units, and renewable energy generators.

Do flexible resources support multi-timescale regulation of power systems?

Here, we focused on this subject while conducting our research. The multi-timescale regulation capability of the power system (peak and frequency regulation, etc.) is supported by flexible resources, whose capacity requirements depend on renewable energy sources and load power uncertainty characteristics.

How to evaluate peak-regulation capacity of power grid?

The existing approaches for evaluating peak-regulation capability of power grid contains deterministic and probabilistic methods. In Yang et al. (2010), a deterministic model was proposed to calculate the maximum capacity of downward peak-regulation considering the constraints of unit parameters.
