

Working principle of subway power supply energy storage device

Can wayside energy storage systems improve regenerative braking energy?

Maximum Regenerative Energy Improvement on R142 Train City University of New York (CUNY)/ConEd/NYCT performed a study pertaining to the application of wayside energy storage systems (ESS) for the recuperation of regenerative braking energy within the NYCT subway system.

What is elastic energy storage - electric power generation system?

With the elastic energy storage-electric power generation system, grid electrical energy can drive electric motors to wind up a spiral spring group to store energy when power grid is adequate, and the stored energy can drive electric generators to generate electrical energy when power grid is insufficient. The working principle is shown in Fig. 2.

How is energy storage used in energy recovery applications?

In energy recovery applications, energy storage is used to reduce energy consumption through the capture and release of regenerated energy from rolling stock. Typically, energy produced by the train during braking is consumed by other trains operating in the vicinity.

How much power would a 7 line substation use a day?

Peak demand on the 7 Line is approximately 26 MW for 2 hours, twice per day. A 25% reduction in demand would require a total of 26 MWh of storage recharged overnight. Control would be based on power draw at each individual substation. Figure 11. Power Demand at the Roosevelt Avenue and 78th Street Substation During a Weekday

How many MWh of storage will a 78th Street substation have?

a total of 26 MWh of storage recharged overnight. Control would be based on power draw at each individual substation. Figure 11. Power Demand at the Roosevelt Avenue and 78th Street Substation During a Weekday
Figure 11 shows demand at the Roosevelt Avenue and 78th St. substation, one of 13 substations serving the 7 Line.

Why do we need emergency energy storage devices?

Even for electrical grids, there may be accidental power loss due to earthquakes or floods, in which case emergency energy equipment provides urgent power for disaster relief and medical first aid. In fact, some traditional energy storage devices are not suitable for energy storage in some special occasions.
